EDUCATION

Indiana University Bloomington 09/2025 - Present

Doctor Of Philosophy Major in Instructional Systems Technology

Minor in Computer Science

GPA: 4.0/4.0

Relevant Courses: Application of Research Methods to IST Issues, Intermediate Statistics Applied to Education, Applied Machine Learning, Usable Artificial Intelligence, Elements of Artificial Intelligence

Columbia University 09/2023-06/2025

Master of Arts in Instructional Technology and Media

GPA: 3.95/4

Relevant Courses: Instructional Design of Ed Technology, Theory and Programming of Interactive Media, Cognition and Computers

University College London (UCL) 09/2020-06/2023

Bachelor of Arts in Education Studies, Institute of Education

GPA: First Class Honors

Relevant Courses: An Introduction to Applied Quantitative Analysis in the Social Sciences, Researching Education and Society: Qualitative Methods, The Learning Sciences

RESEARCH EXPERIENCES

Indiana University Bloomington 09/2025 - Present

Research Assistant

- Led the design and implementation of a 4-lesson embodied-learning intervention for 56 sixth-grade students, translating circulatory-system concepts into movement, physical modeling, and systems-based learning activities.
- Developed and applied coding frameworks to analyze students' written responses and drawings, identifying patterns in their mental models of heart structure, circulation, and oxygenation and supporting inter-rater reliability analysis.
- Documented post-instruction performance of 80-91% of available points on key circulatory-process items and identified persistent difficulties with heart-chamber identification and sequencing, informing recommendations for instructional refinement.

Indiana University Bloomington 09/2026 - Present

Research Assistant

- Designed and developed a four-lesson middle-school curriculum introducing transistors, binary representation, binary addition, and logic gates through hands-on activities and embodied learning.
- Developed a scaffolded learning sequence linking binary addition to logic-gate circuits, using physical role-play and visual models to connect sum-and-carry reasoning with XOR and AND operations.
- Plan to pilot the curriculum with middle-school students, observe how they engage with the activities and interpret key concepts, and use these observations to iteratively refine the instructional design.

Indiana University Bloomington 09/2026- present
Research Assistant

- Proposed a study examining whether metacognitive reflection prompts help students judge their understanding more accurately and benefit from control over AI-generated hints in high school mathematics.
- Designed the workflow for a mathematics learning platform integrating reflection prompts, student confidence ratings, and optional or automatically displayed AI-generated hints to examine how students evaluate their understanding and use instructional support.
- Plan to conduct a pilot study to evaluate task difficulty, hint quality, prompt clarity, and platform usability, using student feedback and interaction records to refine the intervention before the main study.

FELLOWSHIPS & AWARDS

Mary Margaret and Denzil Webb Fellowship, Indiana University Bloomington - **$2,000**
2026-2027
Jerrold E. Kemp Instructional Systems Technology Fellowship, Indiana University Bloomington - **$750**
2026-2027

LANGUAGES AND COMPUTER SKILLS

Languages: Mandarin (Native), English (Proficient), French (Intermediate)

Coding Languages: HTML, CSS, JavaScript, Python

Quantitative Skills: SPSS, STATA, R

Qualitative Skills: NVivo

UI/UX Design: Figma, Adobe XD, Sketch
